D1 : US 6 567 914 B1 (VAN OORSCHOT PAUL ET AL) 20 May 2003 (2003-05-20)

2 INDEPENDENT CLAIM 1

- 2.1 The present application does not meet the criteria of Article 33(1) PCT, because the subject-matter of claim 1 is not new in the sense of Article 33(2) PCT.
Document D1 discloses (the references in parentheses applying to this document) a method to ensure the security of encrypted data ("receipt of the encrypted information from a sender", column 4, lines 33-34) transmitted in blocks to an electronic assembly in several steps ("encrypted using a less secure algorithm such as a single DES", colonne 7, lignes 17-18) characterised in that it consists:

- when said assembly receives a block, in decrypting the block received ("decrypting the encrypted message data", column 7, lines 22-23),
- processing the information contained in said block ("unnecessary header data is removed", column 7, line 19) and
- in encrypting the information processed ("re-encrypting the same data", column 7, line 24).

3 INDEPENDENT CLAIM 8

- 3.1 The subject-matters of independent claim 8 corresponds in terms of apparatus features to that of claim 1. The objection raised in respect of this latter claim, therefore, also applies to independent claim 8, which is thus not new in the sense of Article 33(2) PCT over document D1 and D2 (see Search Report and cited passages).
